- VoIP
- Automated Calls
- Interactive Voice Response (IVR) Technology
- Remote Connectivity
- Personalized Physician's Portal
- Streamlines the Flow of Information Among Patients, Providers, Payors

Hosting Services

- Enterprise-Class Security
- Unlimited Remote Storage Capacity
- Managed Backup and Server Maintenance
- Software-as-a-Service
- Single Unified Database
- Virtualized Desktops
- Top Tier Data Center

A CURE FOR YOUR TECHNOLOGY SHORTCOMINGS

As a healthcare provider, your focus is on delivering quality medical care, not on installing security updates, the amount of server space you have available, or managing a full-service IT team. With ATS/Allscripts My Way®, providers are able to fully integrate Allscripts' practice management, EMR and insurance claim solutions within a single operational environment powered by ATS' state-of-the-art infrastructure hosting services.

Through our unique hosting partnership, we add value to the popular Allscripts My Way® operating platform by backing it with standards-exceeding security and reliability. A top tier data center, multiple redundancy and stringent Data Loss Prevention mechanisms separate ATS healthcare hosting as the leader in EMR hosting.

*You focus on the patient—
we'll be keeping an eye
on your virtual world.*

BENEFITS OF USING THE ATS/ALLSCRIPTS SOLUTION

Affordability-With the ATS/Allscripts Solution, you don't have to pay upfront costs of new servers, firewalls or backup systems. You pay a low monthly fee based on the number of users, while always having the most technologically advanced environment.

Operational Efficiencies-Our solutions are designed to improve IT processes and work flow efficiency, enhance the quality of care and help physicians meet both medical and business objectives.

Security-ATS' Top Tier Data Center meets the most rigorous security standards set forth by HIPAA. Data lifecycle encryption, Data Loss Prevention and secure email ensure that your records are always protected both in transit and at rest.

Reliability-Healthcare can't afford downtime. The ATS/Allscripts architecture allows for 24/7, immediate access to your system. Your data is continuously backed up and replicated to guarantee data integrity in the event of a natural disaster or catastrophic failure.

Integration-We offer a very robust and integrated end-to-end solution that few providers can offer. Our entire team of IT experts and Allscripts Certified Implementation Consultants are here to support and advise your practice as your volume grows and your IT needs become more complex.

Incentives through *The Health Information Technology and Clinical Health Act*-The law provides sliding-scale incentives rewarding early adopters of new technologies higher payments. Physicians can earn between \$44,000 to \$64,000 over five years if they are utilizing EMR by the end 2011.

Environmental Impact-ATS is committed to providing green computing alternatives, and the entire catalog of ATS products was developed to help our client-companies implement environmentally friendly processes. For example, by utilizing one server to virtualize 70 desktops, our clients are able not only to minimize the amount of hardware they use and the frequency at which they replace it, shrink the square footage they devote to IT assets, they can also reduce energy consumption by up to 90 percent.

With the ATS/Allscripts Solution, you don't have to pay upfront costs of new servers, firewalls, or backup systems. You pay a low monthly fee based on the number of users, while always having the most technologically advanced environment.
